## PERSONAL STATEMENT

I am a dedicated, dependable team member with strong interpersonal skills that allow me to flourish within a team and go the extra mile with clients. I use my intelligence to further business goals and am not afraid to think on the job.

## TECHNICAL EXPERIENCE

HTML & CSS	Rails	Heroku
XHTML	AJAX	Adobe Photoshop
Javascript & JQuery	MongoDB	Adobe Illustrator
Angular.js	Mongoose	Color theory
Node.js	Express	User Experience Design
React.js	PostgreSQL	Customer Service
Ruby	Git	
Rails		

## PROJECTS

- **Star Wars Connections**  
Star Wars Connections is a website filled with information about the star wars universe. You can view and search information on characters, vehicles, films, starships, species and planets. This project uses HTML/CSS and Angular.js the front end and uses the third-party API SWAPI (Star Wars API) to get its data.
- **Crosshatch**  
My website is called Crosshatch and it is an interactive site for people who love crafting and being creative. Users can post and access DIY Project instructions. I used HTML/CSS, jQuery and AJAX on my front end and Ruby on Rails as my back end.
- **History of the Internet**  
This app is a timeline of the history of the internet. From its beginnings in 1966 up to present day this website displays important events and the most popular websites of the year. This project uses HTML/CSS and AngularJS on the front end with a Ruby on Rails back end and a PostgreSQL database.
- **MCC Content Management System**  
It is a content management system where users can create accounts, upload files and see them on their profile. They can also see tags associated with their files. This project uses HTML/CSS, jQuery, AJAX in the front end and Node.js, mongoose and express in the back end and with mongoose and PostgreSQL databases.
- **Tic-Tac-Toe**  
My goal in creating this game was to make a beautiful but frustrating game of tic tac toe. I had a lot of fun coming up with different animations, as well as creating a attractive, functional static page. As I continue to work on this project I plan on splitting it into two modes, easy and hard. I used HTML/CSS and jQuery for this front-end application.

## LIKES

## EDUCATION

- From June 2015 to September 2015  
Web Development Immersive  
General Assembly, Boston MA
- From January 2015 to Present  
Graphic Information Technology  
Arizona State University, Online
- From August 2012 to December 2014  
User Experience Design  
University of Arizona, Tucson AZ

## WORK EXPERIENCE

- From February 2016 to Present  
General Assembly
